MATRIX42 MARKETPLACE PRODUCTS

LIS Premium DATA

The all-round carefree package à la carte for the discerning license manager.

Description

Reference data for automation and transparency in your SAM

Installed software is automatically detected on your devices.
The resulting data is not only extremely numerous, but also contains many irrelevant entries. Sorting them out and normalizing the relevant rest into corresponding software products is an extremely time-consuming task. Although the number of purchased items of software licenses is lower, it is not necessarily easier to register and allocate your acquired use rights.

With LIS Premium DATA:

1. You delegate the evaluation of your entire software inventory to a team of specialists. This gives you a clear overview of which licensing products are installed in your SAM tool without any effort on your part.
2. In addition, you will be supported in assigning application usage data to the installed software products, as the relevant software products contain information about the program files.
3. You gain complete transparency over your software portfolio by obtaining metadata for all installed software products. This not only structures your software landscape according to product categories (UNSPSC and eCl@ss*), but also gives you information about the release date and end of maintenance.
4. You can automatically and securely book your purchased licenses from all manufacturers into your inventory using the manufacturer article number (SKU).

5. Reference data for software and license recognition comprises almost 5 million elements for 7,000 publishers and is supplemented each month by tens of thousands more data records (reference data quantity for LIS Standard approx. 700,000 for 10 publishers).
6. You are close to our team of license specialists. At the beginning and every three months, an interview takes place in which your data situation and priorities are discussed and all further activities are coordinated.
7. In addition, once a month you will receive an overview with key figures on your data as well as information on updates in the LIS database for your software manufacturers and software products relevant to you.

Requirements and service conditions:

- Eligibility for LIS Service Level Standard
- Installed SAM product version 9.1.3 or higher
- Guaranteed individual addition of 18,000 data records per year (data credits**)

** Customers must be licensed for eCl@ss to receive this categorization. More information: www.eclass.eu*

** more information on the LIS Premium credit system can be found here.

Additional information

Platform	Digital Workspace Platform (DWP)
Digital Workspace Platform (DWP) Compatibility	9.1
