Generic Asset Bookings

The TAP.DE addon for professional inventory bookings supports the reliable mass processing of asset bookings.

Description

The TAP.DE addon for professional inventory bookings supports the reliable mass processing of asset bookings.

Regardless of whether new devices are to be recorded in the goods receipt, existing assets are to be rebooked, or worn-out devices are to be scrapped – the addon helps to keep asset inventory data constantly up-to-date.

Using barcode or QR code scanners, asset transactions can be recorded even more easily and quickly.

How the addon supports you in your daily business:

Posting / First Receipt / Goods Receipt

Capture any number of assets of any type simultaneously and efficiently in the

Matrix42 solution. Scan serial numbers, inventory numbers or device names, store

delivery note information and easily assign a storage location to the devices. All in just one go!

Transfer

Do you need to set up a new workstation or reorganise? An employee receives new or additional assets, or has to return assets? No problem. Scan as many asset types as you like and assign these assets a new location or warehouse, a new status or even a new employee.

Derecognise / Scrap

Have assets reached the end of their useful life or do you simply need to write off defective equipment? Here, too, you can scan any number of equipment types and assign a suitable status. The main users are automatically removed, the storage location is deleted and a suitable status is set. An optional comment can be added for later traceability.

The functionality of the addon is explained in the following videos:

Posting / First Receipt / Goods Receipt

Transfer

Derecognise / Scrap
